(a) the slice at height $\gamma = 0.5$
$|\zeta(x+0.5i)|^2$
chord on $[0.66, 0.98]$
$x = 0.82$
$|\zeta(x+0.5i)|^2$
x
(b) a convex f would stay ≤ 0 here
$3.00929 - 2.99978 = 0.00951$
above the chord: convexity fails
$f(x) - \mathrm{chord}(x)$
x
