(a) the first open rung is positive but thin
$G_3(m) = D_3(m)/\mu_m^3$
shift m
$m \le 118$ (121 coefficients)
$118 < m \le 198$ (201 coefficients)
fit $\propto m^{-2.79}$ $(m \ge 40)$
(b) the scale of the remaining order-3 gap
uncertified wedge
$198 < m < 2.7 \times 10^{19}$
cubic-wedge tail
computed $G_3(m)$
power-law extrapolation (not a bound)
shift m (log scale)
