High-mode coercivity: log n growth beats a rank-independent budget
actual diagonal A_{nn}, $C = 17$
actual diagonal A_{nn}, $C = 19$
$\delta(n) \le -H_{nn}$ (archimedean, proved)
$\beta_{\mathrm{even}}(n_0)$
$\beta_{\mathrm{full}}(n_0)$
off-diagonal + prime budget
$2\pi B_{\mathbb{R}} + 2\mathcal{P} \approx 14.66$
