7×10^3
8×10^3
43 line zeros with $|w| < |w_0|$
$\Rightarrow$ split at shift $s^* = 44$
10^1
10^2
10^3
10^4
10^5
$|w|$, folded variable $w = (\rho - \frac{1}{2})^2$ (log scale)
235 critical-line zeros ($\psi = 0$)
7 off-line pairs (upper member)
$\pi/436$: wedge for PF_{435}
$\pi/437$ (PF_{436} not guaranteed)
above height 340: $\psi \le 2\arctan(1/\gamma)$
dominant pole $a = \gamma_1^2 \approx 25.9$
